Installation requires partitioning of your hard drive. By default, a partitioning layout is chosen which is reasonable for most users. You can either choose to use this or create your own.

Remove Linux partitions on selected drives and create default layout

Select the drive(s) to use for this installation.

sda 8189 MB VMware, VMware Virtual S

Advanced storage configuration

What drive would you like to boot this installation from?

sda 8189 MB VMware, VMware Virtual S

Review and modify partitioning layout

Network Devices

| Active on Boot | Device | IPv4/Netmask | IPv6/Prefix |
|-------------------------------------|--------|--------------|-------------|
| <input checked="" type="checkbox"/> | eth0 | DHCP | Auto |

Click next to begin
installation of Fedora.

A complete log of the
installation can be found in
the file '/root/install.log'
after rebooting your
system.

A kickstart file containing
the installation options
selected can be found in
the file '/root/anaconda-
ks.cfg' after rebooting the
system.

GNU GRUB version 0.97 (638K lower / 522176K upper memory)

Fedora (2.6.23.1-42.fc8)

Use the ↑ and ↓ keys to select which entry is highlighted.
Press enter to boot the selected OS, 'e' to edit the
commands before booting, 'a' to modify the kernel arguments
before booting, or 'c' for a command-line.

License Information

Thank you for installing Fedora. Fedora is a compilation of software packages, each under its own license. The compilation is made available under the GNU General Public License version 2. There are no restrictions on using, copying, or modifying this code. However, there are restrictions and obligations that apply to the redistribution of the code, either in its original or a modified form. Among other things, those restrictions/obligations pertain to the licensing of the redistribution, trademark rights, and export control.

If you would like to understand what those restrictions are, please visit <http://fedoraproject.org/wiki/Legal/Licenses/EULA>.

Understood, please proceed.

Firewall

You can use a firewall to allow access to specific services on your computer from other computers and prevent unauthorized access from the outside world. Which services, if any, do you wish to allow access to?

Firewall: Enabled

Trusted services:

- FTP
- Mail (SMTP)
- NFS4
- SSH
- Samba
- Secure WWW (HTTPS)
- Telnet
- WWW (HTTP)

▷ Other ports

SELinux

Security Enhanced Linux (SELinux) provides finer-grained security controls than those available in a traditional Linux system. It can be set up in a disabled state, a state which only warns about things which would be denied, or a fully active state. Most people should keep the default setting.

SELinux Setting: Enforcing
